

Auto-Unwrap lazy-loaded components with Angular 15+ 🙌

Before 🙄

```
@Component({
  standalone: true,
  template: `<h1>Auth Page</h1>`
})
export class AuthComponent {
}

// routes.ts
{
  path: 'auth',
  loadComponent: () => import('./auth/auth.component')
    .then(c => c.AuthComponent)
},
```

// Before we had to explicitly unwrap
// lazy-loaded components and modules 🙄

Angular 15+ ✨

```
@Component({
  standalone: true,
  template: `<h1>Auth Page</h1>`
})
export default class AuthComponent {
}

// routes.ts
{
  path: 'auth',
  loadComponent: () => import('./auth/auth.component')
},
```

// Now just add default to component export
// and you can drop .then(...) part 🙄

// it works also with loadChildren + NgModules
